Using the Domino Marketplace Submission Form

The **Domino Submission** form is used to submit content to HCL's Domino Marketplace and results in a page that looks very much like the example shown here to the right.

Two key points to understand before you begin:

- Each submission should include a downloadable file which will be available to users at no cost.
- All pages will follow a standardized format.

The submission form collects all the information needed not only for your tile's content, but also for Marketplace filtering, search, and more. These instructions explain every field on the form and provide examples showing where particular content appears on the page.

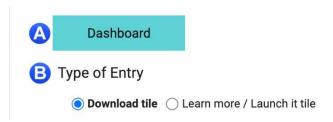

In the provided screenshots, numbers and letters have been used to make it easier to understand where content appears (if it appears). **Red numbers** are used for visible content, and **blue letters** are used for non-visible content, such as search terms.

Once you have submitted the form, it will go through a brief review and approval process prior to going live on the Domino Marketplace site. Please allow a few days to complete this process.

Getting started

As shown in the screenshot here, at the top of the form are a button and radio button field.

A - The **Dashboard** button returns you from this form to a dashboard where you can view all of your HCL Marketplace entries, which

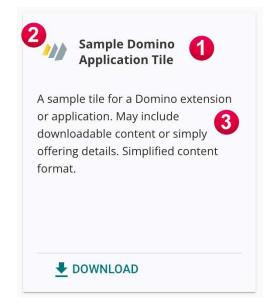

can include content for any of the Marketplaces, including Domino, DX, Leap, and AppScan. Note that this form will not appear until it has been submitted, and you will probably lose your work if you try.

B - Type of Entry. Choose the default, Download tile.

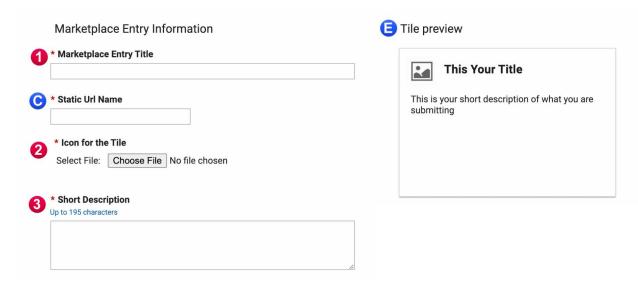

The Marketplace Tile

Shown at the right, the Marketplace tile is how users first discover your submission. Further down this page is a screenshot of the related input fields.

- 1 Marketplace Entry Title. As the name suggests, this is the title on the tile, Sample Domino Application Tile in the example shown here. Keep the name relatively short. Note that this name is also used as the title of the details page inside the tile.
- **C Static URL Name**. Each marketplace tile has a fixed URL. Please suggest a value to be used in your entry's web address, such as *Sample-App-Tile*. Note that this is only a suggestion and the final value may be different.
- 2 Icon for the Tile. Each tile has a square icon. It can be .png, .jpg, .gif, or .svg file format. It should be square, of course, and is typically a logo because it is, after all, relatively small. This image is also used on the detail page inside your tile.

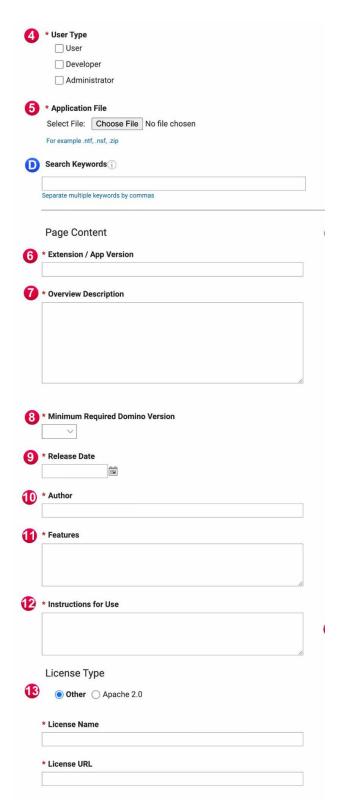

3 - Short Description. The paragraph of text which appears on the tile. This is limited to a maximum of 195 characters, including spaces and punctuation. It should provide enough information for users to get a sense for what your entry includes.

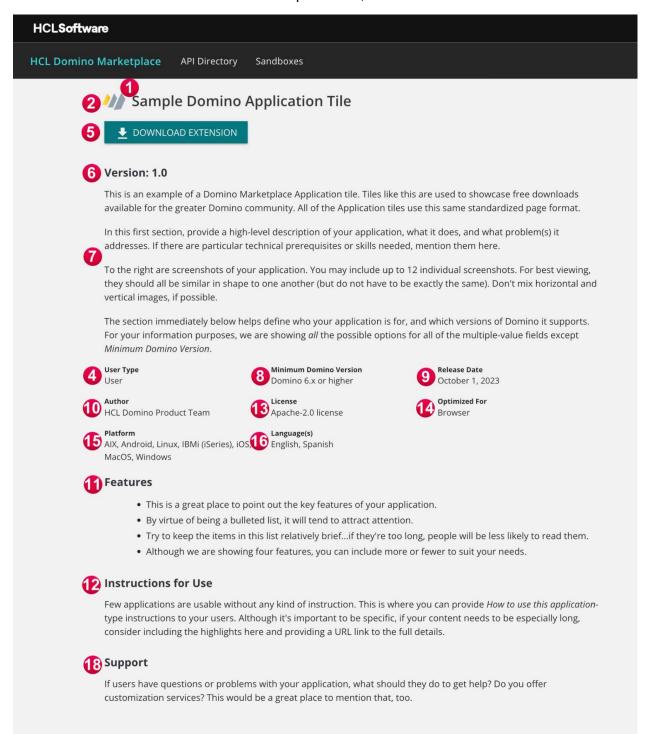

The Marketplace Details Page

The Marketplace Details page is what users see once they've opened your tile. An image of the full page is shown at the top of these instructions and also on the next page with numbers corresponding to the inputs for your reference.

- D Search Keywords. Enter any number of terms useful for searching within the Marketplace for your solution. Separate multiple entries with commas.
- 4 User Type. What kind(s) of users is your solution used by? Check all that apply.
- **5 Application File**. This is the file that will be downloaded by interested users. If your solution requires multiple files, combine them into a single ZIP file.
- 6 Extension / App Version. What version of your solution is this?
- **7 Overview Description**. This is the first and most important paragraph of your Marketplace page. Describe the solution and what problems it addresses.
- 8 Minimum Required Domino Version. Choose from the provided list of choices the *oldest* version of Domino that supports your application.
- 9 Release Date. Choose the release date for this version of the solution.
- 10 Author. Enter the name of the person or team who authored your solution.
- Features. This is typically presented as a bulleted list. If you can only point out 3 to 6 key points users should know about your solution, what are they?
- Instructions for Use. Enter any instructions users would need for setup and/or use of your solution. If you have an outside site where detailed instructions can be found, include the URL.

- License Type. If your solution is offered with a license other than Apache 2.0, enter the name and a URL where it can be found. If Apache 2.0, choose that.

The numbers here refer to those used in these instructions.

Filters

Shown at the right, there are three sets of filters to help potential users understand the types of client devices, servers, and languages supported by your solution.

- 14 Optimized for. What types of devices is your solution intended to be used with? Select all that apply.
- 15 Platform. Most client applications work on any server platform (in which case, select all). However, if yours has specific requirements, indicate that here.
- 16 Language. Which language or languages is your solution available in? Select all that apply.

Image Gallery & Support

Although not required, we highly recommend including screenshots of your solution.

- images to be presented in a gallery like that seen at the right. Your images should be of a similar size and shape to one another (they do not have to be exactly the same). We do not recommend mixing horizontal and vertical images.
- 18 Support. Where should users go when they have questions about or problems with your solution? Include contact information, web forums, links to documentation, etc.
